

day-90-owner-facing-copy-polish

Day 90 â Owner-Facing Copy Polish

- Lane: Mission Control / Gateway owner-facing copy
- Status: Developer-side closed
- Blocker class: NONE
- Start commit: 25da42b
- Scope: Replace vague developer copy with owner-facing language across the Mission Control shell surfaces without modifying approved Gateway mock HTML/CSS/class names.

Inventory

Reviewed owner-visible copy and error surfaces in:

- public/designer-mission-control/src/settings-pages.jsx
- public/designer-mission-control/src/ops-intel.jsx
- public/designer-mission-control/src/meetings-integrations.jsx
- public/designer-mission-control/src/meeting-lobby.jsx
- public/designer-mission-control/src/owner-error-copy.jsx
- src/lib/tool-error-classifier.ts

Found developer-facing phrases such as 'not wired', 'backend not wired', direct 'e.message' notification details, and route-missing copy that could read like implementation residue instead of a truthful owner blocker.

Implementation

- Added a focused owner-facing copy contract test.
- Replaced 'not wired' style copy with explicit owner-facing states such as connector backend unavailable, credential gated, route unavailable, log service unavailable, or disabled until backend support exists.
- Routed remaining shell notification failures through 'ownerFacingErrorText' / 'OwnerErrorCopy' so raw exception messages are not surfaced as owner copy.
- Updated shared route-missing classifier language to: 'This route is not available in this Mission Control runtime.'
- Left approved Gateway designer mock HTML/CSS/class names untouched.

Routes / UI Behavior

- No route behavior changed.
- Mission Control shell settings, ops, meeting integration, and lobby surfaces now avoid developer implementation terms in visible disabled-button reasons and failure notifications.
- Gateway raw mock assets remain the production design contract.

Service / Runtime Behavior

- No external writes executed.
- No Bridge-protected action executed.
- No .env files changed.
- Standalone server proof used localhost only: http://127.0.0.1:3344
- Server PID during proof: 55847
- Restart/deploy action: local standalone proof only; production restart not performed.

Tests And Checks

- RED test first: 'pnpm exec vitest run src/lib/owner-facing-copy-polish.test.ts' failed on the original copy.
- Focused GREEN: 'pnpm exec vitest run src/lib/owner-facing-copy-polish.test.ts src/lib/tool-error-classifier.test.ts src/lib/mission-control-shell.test.ts' passed, 3 files / 25 tests.
- 'git diff --check' passed.
- '.env' diff check passed.
- 'pnpm run typecheck' passed.
- 'pnpm run build' passed.

- 'pnpm test' passed, 204 files / 1509 tests.
- Protected route smoke passed, artifact: runtime/day-90-owner-facing-copy-polish/protected-route-smoke.json
- Authenticated route smoke returned OWNER_GATED as expected without owner session, artifact: runtime/day-90-owner-facing-copy-polish/authenticated-route-smoke.json
- Protected-file invariant scan passed, artifact: runtime/day-90-owner-facing-copy-polish/protected-file-invariants.json
- Secret scan passed, artifact: runtime/day-90-owner-facing-copy-polish/secret-scan.json
- Raw exposure scan passed, artifact: runtime/day-90-owner-facing-copy-polish/raw-exposure-scan.json
- Copy proof passed, artifact: runtime/day-90-owner-facing-copy-polish/copy-polish-proof.json

Proof Artifact

- Screenshot: runtime/day-90-owner-facing-copy-polish/owner-facing-copy-proof.png
- Copy proof: runtime/day-90-owner-facing-copy-polish/copy-polish-proof.json
- PDF report: runtime/day-90-owner-facing-copy-polish.pdf

Rollback

```
""bash
git revert <day-90-commit>
""
```

Closeout Ledger

- Day number and lane: Day 90 â Owner-facing copy polish
- What was implemented: Owner-facing copy cleanup and classifier-backed notification details for shell settings/ops/meeting surfaces.
- Files changed: settings shell, ops shell, meeting shell, lobby shell, owner error helper, shared tool error classifier, copy contract test, runtime report/proofs.
- Routes/endpoints changed: None.
- UI behavior: Disabled reasons and error messages are owner-facing; no raw exception detail or 'not wired' implementation phrasing in targeted surfaces.
- Service/runtime behavior: No external writes; local proof server only.
- Tests run: see Tests And Checks above.
- Deploy/restart/smoke result: Local standalone proof server started on 127.0.0.1:3344, route smokes passed, server stopped.
- Proof artifact: runtime/day-90-owner-facing-copy-polish/
- Remaining blocker: None.
- Exact blocker classification: NONE
- Rollback command: 'git revert <day-90-commit>'
- Commit hash: pending
- Push result: pending
- Confirmation next day started: pending after commit/push
